

The everyday geo localized secure mobile messaging...

Anticipate Innovation and keep several steps ahead with our unparalleled mobile secure messaging application !

SoConect is a friendly standalone totally secure instant messaging with end-to-end encryption that thwarts all fraudulent interceptions techniques known to date ensuring against all intrusions.

SoConect has a unique ephemeral random encryption, which includes an infinite number of combinations to each single terminal and for each connection. It does not use a mathematical formula, equation, or factoring number, it removes all these potential weakness points because the message is part of the encryption mechanism.

Each application is independent and no information is stored guaranteeing a total confidentiality.

SoConect offers its users serenity, friendliness, freedom and simplicity with an unparalleled standard of safety to date based on :

- A proprietary application installed through a trusted platform (Appstore, Google Play, BlackBerry, Windows Mobile, SamApps)
- A biometric recognition module and /or a password
- Geo localization function counting of all users in a selected area distinguishing known and unknown people but also affinities, Clubs, Associations, etc.
- Broadcasting authorization function of targeted or

- non-targeted messages streaming to an adjustable perimeter with a validity period
- No characters limitation
- Attached file, pictures or video possibility
- Works under GPRS/3G network coverage and outside coverage under DTN network
- Configurable API via a computer input console for Clubs, Associations, etc.

We set up safety audits and regular load testing. Access to secured data and services are rigorously logged and regularly checked.

Our policies and safety instructions are carefully documented and regularly checked.

Where are my friends!!!
